

INDITEX

Green to Wear 3.2 July 2026

Sustainability Standard for wet process facilities

(Pre-treatment, Dyeing, Printing, Finishing, Washing, Tanneries and Synthetic leather)

Facilities approved for Inditex productions with corrective action plan - D ranking

Mills are rated as "D" when at least one of the following non-compliance conditions is true.

WATER	The facility does not have authorization in force for all its water resources.
WASTE	The facility burns waste in its utilities and does not have authorization to do it. Burning textile waste is not acceptable in any case.
AIR EMISSIONS	The facility does not have a system to collect/recycle DMF.
	The facility does not have a system to manage permanganate use, avoiding any risk for the workers and the environment.
	The facility burns coal/sludge/diesel/fuel oil without using a filter to control the emissions and/or not meeting legal limits.
CHEMICAL PRODUCTS	The facility does not control the risk associated with the use of fat-liquoring agents.
	The facility does not have a Chemical Inventory List that contains all manufacturing process chemical products, including full name and monthly use, or this CIL is not updated monthly.
	There is any chemical product used in the manufacturing process recipe classified as "C" in the current edition of "The List by INDITEX". Link to "The List by INDITEX"
WASTEWATER	The ETP does not properly treat 100% of process wastewater.
	There is not an effluent treatment plant (internal and/or external) to treat process wastewater before being discharged to the environment.
	The facility does not have authorization in force for its discharge.
	There is a bypass in the effluent.

Facilities approved for Inditex productions with corrective action plan - C ranking (1/2)

Mills are rated as "C" when at least one of the following non-compliance conditions is true.

WATER	The facility does not have properly functioning flow-meters to monitor total incoming and total discharged water.
	The facility uses winch machines with liquor ratio > 1:7.
	The facility does not reuse condensates.
	The facility does not reuse non-contact cooling water.
	The facility does not record its water consumption monthly.
	The facility does not record its wastewater discharge monthly.
	The facility does not correctly manage water, identifying quantity of water used for each process.
	Annual average water consumption (L/kg) does not meet "Excellent level". Link to GTW Supporting Documents
WASTE	The facility does not correctly manage and dispose hazardous waste.
CHEMICAL PRODUCTS	The facility does not carry out degreasing process using a product correctly registered as degreaser in TDS.
	pH of finished leather is not in the range 3.2 - 4.0, as measured according to ISO 4045.
	Skins are discharged and stored out of the drums at a bath pH over 6.0.
	There are no registers of pH measurement of wet-end final baths for each batch of manufactured leather.
	The facility does not use recipes that contain the following minimum information: internal order, chemical product name, chemical product quantity and concentration.
	Percentage of production chemical products certified at Level 3 according to the current version of ZDHC MRSL is less than 95.
	There is any water, stain or oil production repellent chemical product that is not certified at Level 3 according to the current version of ZDHC MRSL.

Facilities approved for Inditex productions with corrective action plan - C ranking (2/2)

Mills are rated as "C" when at least one of the following non-compliance conditions is true.

WASTEWATER	The facility is not checking ETP effluent wastewater COD value quarterly.
	The facility has not disclosed its wastewater results on ZDHC Gateway.
	Process wastewater is discharged to a Municipal Effluent Treatment Plant (ETP) with no previous pre-treatment at the facility.
	Indirect wastewater discharge does not comply with applicable limits.
	Direct wastewater discharge does not comply with applicable legal limits.
	Direct wastewater discharge does not meet ZDHC Progressive level. Link to ZDHC Wastewater Guidelines
	Concentration of MRSL parameters included in ZDHC Wastewater Guidelines is =/> 0,1 ppm. Link to ZDHC Wastewater Guidelines
	Process wastewater is not treated with at least biological treatment or physical-chemical treatment + high rate filtration before being discharged to natural media.
ENERGY	Steam and water leakages are not monitored.
	The facility is burning coal, diesel, fuel oil, or non-preferable biomass when there is local availability of lower carbon fuels.
	Less than 80% of steam pipelines is insulated (including steam and condensate).
	The facility does not have a decarbonization plan in place that maintains a linear reduction of at least 4,2% from the base year.
	The facility does not record its energy consumption monthly.

Facilities approved for Inditex productions - B ranking (1/2)

Mills are rated as "B" when at least one of the following non-compliance conditions is true.

WASTE	Fibers and microfibers are released into the environment without any internal control.
	The facility does not correctly manage and dispose non-hazardous waste.
AIR EMISSIONS	Air emissions from facility operations are not monitored, tested and in compliance with applicable limits.
	Air emissions from process operations are not monitored, tested and in compliance with applicable limits.
CHEMICAL PRODUCTS	pH or colour fastness of garment/substrate are not tested in-house.
	The facility is not equipped with appropriate instrumentation for in-house pH or colour fastness testing.
	Internal pH or colour fastness results of garment/substrate are not properly registered according to INDITEX guidelines and frequencies. Link to GTW Supporting Documents
	Internal pH or colour fastness tests of garment/substrate are not traceable to produced batches.
	There are no monthly pH or colour fastness correlations with external certified testing laboratories and/or test results are not within INDITEX tolerances. Link to GTW Supporting Documents
	There are no available Technical Data Sheets (TDS) and Safety Data Sheets (SDS) for all production chemical products.
	There is no traceability between customer's order, internal facility order, recipe and final article.
	Chemical Inventory List does not include function, chemical formulator, arrival date, storage location, lot number, CAS number and ZDHC MRSL conformance.
	The facility does not apply any additional antioxidant protection treatment.
	Production chemical products are not properly stored.
	The facility does not use recipes that contain the following recommended information: customer order, chemical product lot number, machine reference and production lot number.
	Percentage of production chemical products certified at Level 3 according to the current version of ZDHC MRSL is less than 100.
	There is not a procedure for non-compliances management.
	The facility does not issue usage type Performance InCheck Report monthly and/or does not share Chemical Inventory List on ZDHC Gateway. Link to CIL Management and InCheck Guidance

Facilities approved for Inditex productions - B ranking (2/2)

Mills are rated as "B" when at least one of the following non-compliance conditions is true.

WASTEWATER	The facility does not check ETP incoming and effluent wastewater COD, BOD, pH and TSS values monthly.
	Wastewater is not tested according to ZDHC Wastewater Guidelines twice a year.
	Wastewater discharge does not meet ZDHC MRSL reporting limits. Link to ZDHC Wastewater Guidelines
	The facility is not correctly managing industrial wastewater sludge according to the applicable ZDHC disposal pathway.
ENERGY	The facility does not consume green energy.
	Not all tanks and hot water pipes are insulated (excluding those buried).
	Annual average carbon emissions (tCO ₂ e/t) does not meet "Good level". Link to GTW Supporting Documents
EMS	There is not a sustainability manager with adequate knowledge and ongoing training that manages next issues: MRSL and RSL compliance, environmental requirements and risks associated to the use of those chemical products stored at the facility.

Best in class - A ranking

Mills are rated as "A" when they do not have compliance issues as in D, C or B.

INDITEX

Green to Wear 3.2 July 2026
Sustainability Standard for dry process facilities
(Spinning, Weaving, Knitting)

Facilities approved for Inditex productions with corrective action plan - D ranking

Mills are rated as "D" when at least one of the following non-compliance conditions is true.

WATER	The facility does not have authorization in force for all its water resources.
WASTE	The facility burns waste in its utilities and does not have authorization to do it. Burning textile waste is not acceptable in any case.
AIR EMISSIONS	The facility burns coal/sludge/diesel/fuel oil without using a filter to control the emissions and/or not meeting legal limits.
WASTEWATER	The facility does not have authorization for its discharge.

Facilities approved for Inditex productions with corrective action plan - C ranking

Mills are rated as "C" when at least one of the following non-compliance conditions is true.

WASTE	The facility does not correctly manage and dispose hazardous waste.
WASTEWATER	Direct wastewater discharge does not comply with applicable legal limits.
	Indirect wastewater discharge does not comply with applicable limits.
ENERGY	Steam and water leakages are not monitored.
	The facility is burning coal, diesel, fuel oil, or non-preferable biomass when there is local availability of lower carbon fuels.
	Less than 80% of steam pipelines is insulated (including steam and condensate).
	The facility does not record its energy consumption monthly.
	The facility does not have a decarbonization plan in place that maintains a linear reduction of at least 4,2% from the base year.

Facilities approved for Inditex productions - B ranking

Mills are rated as "B" when at least one of the following non-compliance conditions is true.

WASTE	Fibers and microfibers are released into the environment without any internal control.
	The facility does not correctly manage and dispose non-hazardous waste.
AIR EMISSIONS	Air emissions from facility operations are not monitored, tested and in compliance with applicable limits.
	Air emissions from process operations are not monitored, tested and in compliance with applicable limits.
CHEMICAL PRODUCTS	There are no available Technical Data Sheets (TDS) and Safety Data Sheets (SDS) for all production chemical products.
	Production chemical products are not properly stored.
ENERGY	The facility does not consume green energy.
	Not all tanks and hot water pipes are insulated (excluding those buried).
	Annual average carbon emissions (tCO ₂ e/t) does not meet "Good level". Link to GTW Supporting Documents
EMS	There is not a sustainability manager with adequate knowledge and ongoing training that manages next issues: MRSL and RSL compliance, environmental requirements and risks associated to the use of those chemical products stored at the facility.

Best in class - A ranking

Mills are rated as "A" when they do not have compliance issues as in D, C or B.
